1672.

Apollo Anglicanus,

THE

ENGLISH APOLLO:

Assisting

All Persons in the right Understanding of this Years Revolution, as also of things past, present, and to come.

With necessary *Tables* plain and useful.

A twofold Kalendar, *viz. Julian* or *English*, *Gregorian* or *Fortin* Computations, more plain and full than any other; with the Sun and Moons Risings, and Settings, dayly observ'd.

Being the Bissextile *or* *Leap-Year.*

With a useful Continuation of

GESTA BRITANNORUM,

From 1600 to this present Year.

By RICHARD SAUNDERS

Student in Astrology and Physick.

Cognosce alia, ut te cognoscas; cognosce teipsum, ut cognoscas Deum.

Cum Privilegio.

LONDON, Printed by *Andrew Clark* for the Company of Stationers 1672.

A Table shewing how many years Purchase a Lease or Annuity, to endure for any Term of years under 33. is worth presently at Interest upon Interest, at six in the hundred: and shewing plainly how to discount any Lease in Being, and the true value of the Reversion after any number of Years.

Years of a Lease.	Years.	Months	dec. par.
1	0	11	0
2	1	9	9
3	2	8	1
4	3	5	9
5	4	2	5
6	4	11	0

12	8	4	6
13	8	10	3
14	9	3	6
15	9	8	5
16	10	1	3

The use and Explanation of this Table.

The first Column towards the left hand, sheweth the yeares of a Lease or Annuity, and right against each Year, is the Years Months and Decimal parts of a Moneths purchase, that such a Lease or Annuity is worth.

Example.

Suppose a Lease or Annuity to continue ten Yeares, and you would know how many years purchase it is worth in present money, look in the Table for ten years of a Lease to the left hand, and against the same you shall find 7,4,3 which sheweth such a Lease to be worth seven years four months, and three tenth Parts of a Months purchase.

Years of a Lease.	Years.	Months	dec. par.
17	10	5	8
18	10	9	9
19	11	1	3
20	11	5	7
21	11	9	3
22	12	0	5
23	12	3	6
24	12	6	6
25	12	9	4
26	13	0	0
27	13	2	5
28	13	4	9
29	13	7	1
30	13	9	2
31	13	11	1
32	14	1	0

Again, are you to take or buy the Reversion of any Lease or Annuity, work thus, Suppose the Lease to be thirty years in all; you find in the second Table, and right hand against thirty, 13 years 9. months, and two tenth Parts of a moneths purchase; this it were worth, were it in present possession. But suppose there be a Lease of five years (more or less) before your Commence; look in the Table against the five Years, and there you find four Years, two Moneths, five tenth parts, halfe a Moneths purchase; take this out of the sum against thirty, which is 13,9,2. 4,2,5. The remainder is 9. years six moneths, seven tenth parts of a month; and so much is the Reversion after five years worth, the remainder of thirty years. This is usefull and very easie.

A Table of the Kings and Queens of *England* since the Conquest.

Kings & Queens n.	Born Anno.	Began to Reign.	Reigned Y. M.	Since their reigns ended.	Buried at

Note, The Exchequer opens eight days before any Term begins, except *Trinity*-Term, before which it opens only four days.

Note, That the first and last days of every Term, are the first and last days of Appearance.

Directions for the subsequent Diary, or Almanack.

1. IN the first column to the left hand, on the left hand page, you have the Numeral figures of the days of the Month.

2. In the second column you have the week days, and Dominical Letter,

3. You have all the principal and observable Saints days and others; the places of the Planets, and the Moon most nights with what fixed Stars she is with, is observed; by which the Asterisms and Constellations are easily known to an ingenious eye and understanding.

4. The Moons place in the Zodiack every day at noon.

5. The age of the Moon, by which the Tides are known.

6. The rising and setting of the Moon, every day in the year.

7. The general state of the weather, with much care performed by the Author.

8. In the 8. column, the first on the right hand, you have the English account. In the 9. the Forein. In the 10. the Roman week days, and Sunday Letter.

11. The perfect Roman Kalendar and Saints days.

12, 13, 14, the utmost to the right hand, you have the dayly rising and setting of the Sun, with the Aspects.

A Table to find when the Moon will be full South every day this year, whereby the time of Tides is exactly known.

D	D	M	M	

First find her age in the 5. column of the Almanack, which is exactly every day noted; which age seek out in one of the two columns of this Table to the left hand, against which in the third and fourth columns is the hour and minutes which shew the time of the Moons being South.

As for example, the 8. day of *March* the Moon is 19 days old, which being found in the 2 column of this Table against 4, to the right hand, it points to 3 h. 12 m. at which time the Moon is South the said 8. day of *March* 1672. *Et sic de cæteris.*

Here note, that all the increase she cometh to the South in the evening following the Sun; but in the decrease, in the morning going before the Sun.

By any Sun-dial you may know the hour of night by adding to the time of the Moon being South after, or subtracting before.

To find the time of High water in most Coasts of England.

First, as you before were taught, find at what time the Moon will be South, for then you may truly conclude it High-water at *Southampton*, *Quinborough*, and *Portsmouth*, for there the South and North Moons make a High-water. But when you desire the time of Full Sea in any of the following Coasts in the ensuing Table, find the name of the place, and see how many hours and minutes be annexed thereunto in the Column under *H.M.* which added to the time of the Moons coming to South, gives you the time of High-water for the place required.

A Tide-Table, with the Names of the Havens.

	H.	M.
Rochester, Maldon, Aberdeen,	0	45
Gravesend, Romney, Rankins,	1	30
London, Tinmouth, Hartlepool,	3	0
Frith, Leith, Dunbar, Narborn,	4	30
Newcastle, Falmouth, Humber,	5	15
Lyn, Antwerp, Plimouth, Hull,	6	0
Bristol, Lanior, Foulness,	6	45
Milford, Bridgwater, North-coast,	7	30
Portland, Peterport, Hastflew,	8	15
Dover, Yarmouth, Harwich, Dublin,	10	30
Callice, Rie, Winchelsey, Calshot,	11	15

Example.

The 8. of March this year, it is required to know the time of Full Sea at *Newcastle*: by the Kalendar over against the 8. of March, in the fifth Column, I find the Moon 19 days old, and by the foregoing Southing Table, I find the Moon South at 3 hours 12 minutes in the morning; then in the preceding Table, against *Newcastle* I find 5 hours 15 minutes, which added to 3 hours 12 minutes, the aggregate is 8 hours 27 minutes, wherefore I conclude it High-water there at 8 hours 27 minutes in the morning: so of any other.

Take notice that the Tide floweth one point of the Compass more at the Spring-Tide (which is the New and Full Moons) than at the Neap-Tides (the first and second Quarters) As also the Latitude of the Moon and Winds may alter it an hour sooner or later; let it be their providence who depend upon the Tides to make timely provision.

The Tides like timous Humours never rest,
Still constant in inconstancy at best.

A true Chronology of memorable things to this year 1672

	Brute entred this Island of *Great Britain*	2798

SAUNDERS,

1672.

Of Eclipses this present Year 1672.

THere will be Four *Eclipses* this Year, *Two* of the *Sun*, and *Two* of the *Moon*; onely the last of the Sun, and the last of the Moon will be somewhat conspicuous to us, if the Sky be cleer.

The first is of the *Sun* the 18th of *February*, near three a clock in the afternoon; the *beginning* of this Eclipse will be seen at Sun-rising in the *Pacifique*-Ocean, in the South part thereof, and under the *Meridian*, which descendeth by the Capeschine, and Nixapantine Mountaines: The Eclipse increaseth under the Meridian that passeth *Nova-Granada*, and the *Azores*; The *Sun* will be Totally darkned: This will be conspicuous in *Brasile*, the *Ethiopian Sea*, and *Africk* in the Kingdome of *Congus*: I wish our English Travelors in those parts would observe it.

The Second is of the *Moon* March 3, a Quarter past three in the afternoon; this Eclipse will be in the Meridian to them who live nine hours forty minutes more to the West than we, or in the longitude of 133 degrees 15 minutes, which passeth *New-Ginney*, *Japan*, and *Cathay*.

They shall see the beginning which live in North-*America*, in *Hispania Nova*, in *Persia*, *Tartary*, and *Nova-Zembla*.

They shall see the End in that part of North *America*, near the Promontory of *Perecles*, the Island of St. *Peter*, and in the west Ocean; In the Kingdomes of *Egypt*, the *Abixines*, *Natolia*, *Ponto*, *Euxino*, *Moscovia*, *Russia*, and *Lappia*, between 5 and 6 digits will be darkned.

The third Eclipse is of the *Sun* the 12th day of *August*, at three quarters past five in the afternoon.

	Ho.	
The beginning will be at	4	22
The middle at	5	48
The end at	7	13
The whole duration	2	51

The *Sun* will set to us 12 minutes before he wholly recover his light; *Mercury* is very strong in this *Eclipse*, being fortified with 18 Dignities, and *Saturn* with 10: All the other Planets very weak. All the significations of this *Eclipse* depend upon ☿ and ☽, and may Prognosticate about *December* and *January* much wind and hard weather.

In the North parts of *America*, near the Mountaines *Sicera*, and *Nevada* this Eclipse will begin, as the *Sun* beginneth to arise to them; and, in the Country of *Quivira* the Sun will arise Totally Eclipsed to them, at which time the Sun will be Totally Eclipsed in the Meridian of *Nova-francia*, and the Mexican Sea: Lastly, the *Sun* will set Totally Eclipsed to them who inhabit or travail the *African shore*, and the Sun recovers his whole light at his setting on the Coasts of *Brasill*.

The Fourth and last *Eclipse* is of the *Moon*, the 28 day of *August*, at 16 min. after 6 in the morning, near her setting, and can be but little seen of us, for the beginning will be but 23 min. before Sun rise, the Middle will be 46 Minutes after Sun rise, the end will be at 25 min. after 7 in the morning, one hour 25 minutes after the Moons setting, the whole duration will be two hours 18 minutes: Digits Eclipsed are 4, and somewhat more. All the Planets in this Eclipse are very weak, especially ♃. Onely excepting ☿ who is very strong, as having 20 cleer testimonies of fortitude; *Et denotat lucra mercatoribus & Digna laborantibus præmia*, &c. promiseth gain and profit to Merchants, and good success and reward to all Industrious Actions: but being configurated to ☽, will this Winter and next spring much promote Distempers of the Breast and Lungs, and cause difficulty of Breathing, Tissick, Coughs, and the like, the ☽ also in ☌ of ♂ at the time of her Deliquium: *Tepiditatem Æri inducit, & frigus ventis occidentalibus Calidioribus, affert.*

The

The *Meridian* of this Eclipſe hath Occidental diſtance from us: 6 Houres odd minutes in the 104 degree, 36 minutes of Longitude, as the Pervian Ocean, the Sinus Mexicanus and Florida.

They ſhall ſee the *beginning* which are in the Countryes of *Bewin*, the inward *Lybia*, *Barbary*, the *Mediteranian-Sea*, the *German-Ocean*, and the Promontories of *Sierra* in *America*.

The end ſhall be viſible to them which *Navigate* between *Africk* and *Braſill*, in the Iſlands of St. *Martin*, *Frieſland*, *Greenland*, and the *Occidentall* Ocean, where are ſcituate the Iſlands of *Hermanni* and others.

Of the Four Quarters of the Year,

And firſt of the Spring,

WHich *begins* this year (the Sun entring the firſt Scruple of Aries) the 9th of *March*, 32 minutes paſt 4 in the afternoon, equalizing day and night, *Mars* and the *Sun* are principally ſtrong, and rule this Quarter, *Mercury* participates in power, as being dignified with 13 Fortitudes; *Jupiter* and *Venus* have ſome ſtrength, but *Saturn* and the *Moon* very weak; from whence is collected, that a warm and dry Spring may be expected, with much South and Weſt winds not very healthfull. *Mercury* is very ſtrong in all the Quarters, having 68 cleer eſſential dignities; beſides, he is principal ruler in both the Eclipſes; *Mars* is next in power, as having 33 dignities, the *Sun* 24, the ☽ 9, and *Venus* 5. Thus *Mercury* is very principally potent through the whole courſe of this revolution (as he hath been in former years lately) Arts and the Profeſſors ſhould be honoured with more then ordinary reſpect, and this will ſtir up the ſpirits of ingenious perſons, and ſtrenuouſly incline their minds (as hath been of late Prognoſticated by me in my former Almanacks) to Aſſert the Honour, Dignity, and worth of Scien-

ces, from those sordid malicious odiums, which have besmeared those precious *Jewels*, through the stupid Ignorance of some, and the impudent malice of others, under such powerful *Mercurial Revolutions*, worthy *Champions* for truth and Arts shall arise; who, judiciously, soberly, learnedly, and affectionately, shall *revive* out of the *Cinders* of contempt, those precious Arts, which former ages had obspurcated and defiled, and stoutly justifie and cleere those truths, which have been maliciously opposed.

Of Summer.

THis Quarter begins, the *Sun* entring the first Scruple of *Cancer*, which is this year the 10th of *June*, 29 minutes past 7 in the afternoon, making the longest day in this Northern part of the World. The *Moon* in this Quarter is most strong, with *Saturn* who is next in power, and may cause an unkindly season, too *cold* and *moist*, cloudy, dull, sullen weather in the general; *Nam Saturnus Tempore enim Caloris, calorem minuit, & Tempore frigoris, frigus auget*, &c. much unwelcome Sickness is also to be feared.

Of Autumn,

WHich *begins* this Year the *Sun* entring *Libra*, *September* 12th, 48 min. after 10 in the morning, equalizing again day and night. Wily *Mercury* prodigiously predominates in strength with ☽, the *Moon* indifferently well fortified, as also ♂ and ♀, which promise Good to the Commonalty, and *Profit* by inferior Trades and Callings.

Of Winter,

WHich takes beginning (the *Sun* entring the first scruple of *Capricorne*) the 10th day of *December*, near eleven at night; *Mars* and the *Sun* in this Quarter very strong, *Mercury* well fortified as formerly, *Jupiter* and *Venus* indifferent, the *Moon* and *Saturn* very weak and impotent; Hard weather and hunger may pinch poor people.

A *Continuance* of a *Cleeſtial Cronology* for ſome Hundreds of *Years paſt*, ſhewing the *Poſition* of the *Heavens* at thoſe times *England* hath ſuffered under the *ſad* and *dolefull Calamities* of *Famine*, and unuſual *Froſts* and *Snows*.

Of Famines.

IN the *Year* of our Redemption 982, 690 years ſince, in the dayes of King *Etheldred*, the *Danes* moſt grievouſly afflicted and infeſted this Kingdom, in which year was a moſt miſerable *Famine*, that People being driven to the extremity of unwholſome, and unwonted dyet, cauſed ſtrange Feavors and Diſeaſes, with a great Mortality amongſt the People, and Murrain amongſt Cattel, ♄ was then in ♊, and R in ♋, ♃ in ♏ R, and Dir, *Mars* in ♌ ♍ ♎ and ♏:

1315, 357 years ſince, in the Reign of *Edward* the Second, was ſo great a *Famine*, that a Parliament was called on purpoſe to ſet the Prices of Victuals, and to conſider for the beſt; yet notwithſtanding, do what they could, all Victualls grew ſcarcer every day then other; that it was obſerved by *Walſingham*, that upon St. *Laurence* Eve this year, there was ſcarcely Bread to be gotten for the ſuſtentation of the *Kings* own *Family*: ♄ was then in ♐ R and Dir. ♃ in ♐ in Conjunction with *Saturn*, ♂ in ♊ ♋ ♌ and ♍: This *Famine* continued the next year (with little relief) 1316: ♄ in ♐, ♃ in ♑.

1389, 283 *years* ſince: A ſad *Famine* for a whole year indured, that the people for *want* of *Bread* eate Apples, Nuts, and ſuch traſh, which brought the Flux upon them, whereof abundance dyed: this *ſcarcity* did ſo oppreſs the common people, that it was continually ſeen and heard, poor helpleſs *Infants* and *Children* in Streets and Houſes (through Hunger) Howling, Crying, and making ſad Mone for *Bread*, (whoſe Mothers had it not (God wot) to break un-

to them: *Saturn* was then in ♊, and ℞ in ♋: ♃ most part of the time in ♌, sometime in ♍, ♂ was in ♊ ♋ ♌ and ♍. Its observable that ♄ was (in all these Famines) in ♊, and its opposite sign, ♃ most part in the fiery triplicity, and *Mars* in the same Signs: The *like* position of Heaven will be in the years 1678 and 1692: and it may be *just* with *God* that in these years, or sooner, this Nation may feel this most sad and doleful Plague, who have so long surfetted on plenty, and have been unfruitfull, and so *ungratefull* to *God* for his most *great Mercies*, in the full enjoyment of *Plenty*.

Great Frosts, Snows, and unkind Seasons.

IN the year of our Lord 1269, 403 years since, an exceeding great *Frost* began in *November*, and continued till *February*, that the Thames was so Frozen, that people and Cattel passed over every where; no Ships could come in for Ice; and, on the sixth day of *February* fell so great abundance of *Rain*, that the Thames never rose so high in the memory of man; all the *Cellers* and *Vaults* in London near the water-side were drowned, and abundance of Merchandise spoiled, ♄ then in ♎, ♃ in ♒ ♂ in Southern Signes.

1363, 309 years since, was a very great *Snow* and *Frost*, which began the 27 day of *September*, and continued till the beginning of *Aprill* the next year, so that the ground lay untill'd, to the great spoil of growing Commodities: ♄ was then in ♍, ♃ in ♑, ♂ in Southern Signes.

In 1564, 108 years since, the 21 of *December* began a *Frost*, which continued so extreame, that on *New-Years-Eve*, people went over, and along the Tames upon the Ice thicker then in any street in London, and shot at marks upon the Ice, and played at Football thereon; but on the third of *January* at night it began to thaw, and thawed so quick, that on the fifth day of *January* was no Ice to be seen between London-bridge and *Lambeth*, which sudden Thaw caused great floods, that bare down Bridges and Houses, and drowned many people in *England* especially in *Yorkshire*; *Ouse bridge* was broken down, with others, ♄ then

then in ♌, ♃ in ♍, ♂ ☿ ☿, and the ☉ in Southern Signes.

In 1293, 379 years since, on the 14th of *May*, fell a wonderfull *Snow*, and therewith blew such exceeding great Winde, that much hurt was done thereby, ♄ then in Gr. 0 16' of ♈, ♃ in ☍ R. ♂ in 21 ♊.

1149, 523 years since, a very Rainy Summer, that a Dearth followed; in the VVinter, about the 10th of *December* a *Frost* began, which continued to the 19th of *February* following, Men and Horses past over the Thames, ♄ then in ♉, ♃ in ♍, ♂ in ♉ and ♊.

In the year 1205, 467 years since, the 14th day of *January* it began to Freeze, and so continued till the 22th of *March*, with such extremity, that Husbandmen could not Plow nor Sow, which caused great scarcity of *Corne* the year following, ♄ then in ♐, ♃ in ♈, ♂ in ☍ and ♍.

In 1246, 426 years since, on St. *Mark's* day was so great a *Frost* and *Snow*, which nipped the leaves of Trees and Herbs in such extreame manner that for the most part they withered and faded away, ♄ in ♏, ♃ in ☍ R. ♂ in ♊.

In the year 1093, 579 years since, the latter end of the year, was an excessive *Rain*, causing great *Floods*, then a sudden *Frost* came, whereby the great streams were congealed, in such manner, that at their Thawing many Bridges of VVood and Stone, and Mills were broken down and carried away, ♄ in ♓, ♃ in ♎, ♂ in ♌ Dir. and R.

1435, 237 years since, a vehement *Frost* from the latter end of *December* till the 10th of *February*, so that all commodities were brought to *London* by land.

1523, 149 years since, after a very *wet* Summer, followed a nipping *Frost*, so extreame, that many dyed for c ld, some lost Fingers, some Toes, some Nails, *&c.* ♄ in ♈, ♃ in ☍, ♂ in ♉ ♊ and ♎.

1579, 93 years since, on the 24 of *April*, between the hours of 4 and 9 in the morning, fell a *Snow*, that it lay in London above a Foot deep, ♄ was in 6 gr. ♒, ♃ 6 ♏ R. ♂ 2 ♓, ☿ 29 ♈, ♀ 9 ♉, ☽ 14 ♉, ☽ 15 ♈, ☌ ♃ ☍ ☿, □ ♄ ♃, □ ♄ ☿.

1573.

1573, 95 years since, A sharp Frost from Allhallantide till Twelftide and after with deep *Snowes*, and sometimes Rain, which Freezed as fast as it fell to the ground, so that the Boughs of Trees broke from the Body, being over-charged with Ice; and the wind continued North and East till after Holy-Thursday, with sharp *Frosts* and *Snowes*, ♄ then in ♏, ♃ in ♈ and ♉, ♂ in ♒ ♓ and ♈, ♄ in ☐ to ♂ ☌ ♃ ♂.

1585, 87 years since, a great *Snow* fell in *February*, and continued long, ♄ in ♈, ♃ in ♈, ♂ in ♌ R. the other in Southern Signes.

1614. 58 years since, a vehement *Frost* and great *Snow*, which long continued, much Cattel buried alive, ♄ was then in ♈, ♃ in ♏, ♂ in ♌ R. the other in Soushern Signes.

In the year of Redemption 1503, 169 years past, was a very great Drought, no Rain from *Whitsontide* till the latter end of *August*: ♄ then in the beginning of ♍, ♃ in ♋, ♂ in the very beginning of ♉, at VVhitsontide, and after in ♊.

In the time of King *Edward* the Third was a Frost that lasted from the midst of *September* to the Month of *April*.

In the year 1609, 63 years since, a Frost began in *December*, which continued till *April* following, with such violence, that not only the *Thames* was so Frozen, that Carts loden were driven over it, as on dry land, but many Fowles and Birds perished, as also much Herbage in Gardens, especially Artichokes and Rosemary, with Laurel and Bayes were destroyed, ♄ was then in ♒, ♃ in ♉ ♂ in ♈ ♉ and ♓r

In the year 1408, 264 years since, being the 9th year of *Henry* the Fourth, was so sharp a Winter, and such abundance of Snow continued *December*, *January*, *February* and *March*, that almost all small Birds dyed through hunger.

GESTA

GESTA
BRITANNORUM.

Being a Useful Commemoration of most remarkable Matters from the year 1600 to 1641, and the most observable Passages of the last year, not any of them by me Recorded before.
